- automata, 24, 27

- background radiation, cosmic, 164
- bending of light, 42, 59
- big bang, 18, 161, 165
 - evidence for, 164–165
 - ultra-supermassive black hole, 163, 166–167
 - wisp big bang theory, 164
- big crunch, 167
- black-body radiation, 3
- black holes, 161–163
 - and general relativity, 161
 - centre of a black hole, 163

- small, 163
- supermassive, 163, 166
- ultra-supermassive, 161, 163–164, 167
- what are they? 161
- Boeing, 62–63
- bosons, 5–6
- Bradley, James, 100

- Cantor, Georg, 21
- CERN, 4
- clocks:
 - atomic, 8, 80
 - body, 81
 - light-pulse, 89
 - mechanical/biological, 94–95
 - run slow, 78
- COBE, 164
- collisions, 27–28, 151–154
- conservation of charge, 159–160
 - created or destroyed, 159
 - quarks in pairs, 160
- conservation of momentum, 151–154
- conservative field, 45
- coordinate transformations, see wisp transformations
- cosmic microwave background radiation, 164
- cosmological principle, 161
- curvature, 49, 50
 - measurement of the arc of a circle, 49
 - of space–time, 41–43
 - of wisp space, 26, 39, 43–49, 52, 55–56

- dark matter, 167
- de Broglie waves, 32

- de Broglie, Louis, 32
- decelerating subatomic particles, 111
- Democritus, 1
- Descartes, René, 29
- dilation factors, 79–80, 89
 - force, 80, 91
 - jiggle, 80, 92–93
 - time, 8, 80
 - general dilation equation, 90
 - in light-pulse clock, 89
- Dirac, Paul, 3, 18
- Doppler effect of light, 137,
 - approaching observer, 144
 - approaching source, 145
 - general motion: observer and source moving, 147
 - approaching a stationary source, 146
 - receding from a stationary source, 142–143
 - source moving and observer stationary, 146
 - testing a moving observer's transverse Doppler effect, 143
 - transverse – moving source, 140
 - transverse experiments, 141
 - transverse observer motion, 139
 - transverse source motion, 141
 - wisp's general Doppler equation, 148
- Doppler effect, sound, 137
- Doppler effect, water waves, 137

- $E = mc^2$, 4, 108, 155–157
 - derivation of formula, 156
